

Cloud Security Engineer

Jimil Prabtani

jimil111prabtani@gmail.com | [LinkedIn](#) | [GitHub](#) | [jimilprabtani.me](#)

Summary

Software Systems Engineering graduate focused on cloud and network security, with hands on work in Azure security, threat detection, and application security. Builds security tooling such as an AI assisted web vulnerability scanner and a phishing awareness platform. Certified in Azure Security (AZ 500), Azure Networking (AZ 700), Security + and Network+.

Technical Skills

Cloud Security (Azure)	Defender for Cloud, Microsoft Sentinel, Application Gateway WAFv2, Key Vault, Entra ID, Conditional Access, RBAC, Private Endpoints, Azure Monitor, AKS, Azure Policy, Bicep
Cloud Security (AWS)	VPC, IAM, Security Groups, CloudTrail, CloudWatch, GuardDuty, S3 Security, Secrets Manager, AWS VPC Flow Logs, AWS IAM Access Analyzer, AWS S3 Access Logging, AWS Inspector, AWS WAF
DevSecOps & AppSec	OWASP Top 10, SAST, DAST, SCA, SonarQube, Trivy, OWASP Dependency Check, Docker, GitHub Actions, Jenkins, CI/CD Security
Detection & Response	SIEM and SOAR (Microsoft Sentinel), Microsoft Defender, KQL, MITRE ATT&CK, Incident Response, Vulnerability Assessment, Log Analysis, Wazuh, Alert Triage
Network Security	Cisco CLI Hardening, ACLs, IPsec VPN, VLAN Segmentation, EIGRP, OSPF, BGP, pfSense/AWS/Azure Firewalls, Wireshark, Nmap
Programming	Python (FastAPI, Flask, Streamlit, Pydantic), Bash, PowerShell, Git
AI Security	LLM Integration, Multi Provider AI Orchestration, Prompt Design, SSRF and Secret Redaction Safeguards
Frameworks & GRC	NIST CSF, ISO 27001, CIS Controls, STRIDE Threat Modeling, Risk Assessment, GDPR, PHI PII, PCIDSS

Experience

ProSec Telecommunications

Remote

Network Security Engineer Intern

Nov 2025 to Mar 2026

- Configured and hardened Cisco routers, Layer 2 and Layer 3 switches, and firewall appliances through the CLI, applying granular ACLs and IPsec VPN gateways across 4 branch offices.
- Deployed EIGRP, OSPF, and BGP routing across a multisite WAN and enforced VLAN segmentation to isolate network zones and limit lateral movement.
- Ran packet level traffic analysis in Wireshark across 5 incident investigations, identified unauthorized access and brute force attempts, and wrote remediation reports for senior engineers.
- Assessed network devices for known weaknesses and authored security hardening runbooks that cut recurring issue resolution time by roughly 30%.

Refinery Complex, Canada

On site

Safety Compliance and Auditing Analyst (Co op)

Apr 2024 to Jun 2025

- Ran hourly compliance audits in a high risk operational facility over 14 months and maintained full protocol adherence.
- Kept detailed chain of custody incident logs and audit records that met formal review standards.
- Led the response to protocol violations, documented root cause, and coordinated corrective actions across teams.
- Trained staff on compliance procedures and served as the primary point of contact for audit questions.

Projects

WebPenTest AI Toolkit [Project Repo](#)

Python, FastAPI, Streamlit

- Built an automated web application vulnerability scanner that crawls a target and runs over 30 checks across 7 categories including reflected and DOM XSS, SQL injection, template injection, exposed secrets, and security header issues.
- Designed a multi provider AI layer (Gemini, OpenAI, Anthropic, Ollama) with an automatic fallback chain that scores findings with CVSS, maps them to CWE and OWASP, and generates remediation with code examples.
- Reduced scan time roughly 4 times using a four worker thread pool and cut HTTP requests about 50% with response caching; served results through a REST API, a Streamlit dashboard, and a CLI.

- Added built in safeguards including SSRF protection, API key authentication, rate limiting, and secret redaction; validated against OWASP Juice Shop with a suite of over 30 tests.

Phishing Awareness Simulation Platform [Project Repo](#)

Python, Flask, SQLAlchemy, SMTP

- Built a Flask platform for authorized security awareness training that sends simulated phishing emails and tracks recipients through unique per recipient tokens.
- Created a campaign dashboard showing click rates, timestamps, and per recipient details captured at click time.
- Used SMTP delivery with reusable email templates, a SQLite backend, and configuration handled through environment variables.

Azure Defense in Depth Web Application [Project Repo](#)

Azure App Service, Application Gateway WAFv2, Key Vault

- Deployed a Python web application to Azure App Service behind Application Gateway WAFv2 with the OWASP managed rule set, moving the policy from detection to prevention after tuning.
- Stored TLS certificates and connection strings in Azure Key Vault and restricted the App Service so that only the gateway could reach it.
- Configured Azure Monitor logging and alerts for failed requests, WAF events, and resource health, and used STRIDE threat modeling to guide the design.

DevSecOps CI/CD Pipeline [Project Repo](#)

Jenkins, SonarQube, Trivy, Docker

- Built a Jenkins pipeline that runs static analysis with SonarQube, dependency scanning with OWASP Dependency Check, and container image scanning with Trivy before deployment.
- Containerized the application with Docker and hardened the host using restricted security groups, key based SSH, and least privilege access.
- Added Prometheus and Grafana dashboards to monitor pipeline and system metrics.

Azure Security Labs (AZ 500)

Microsoft Sentinel, AKS, Entra ID

- Completed the Microsoft AZ 500 hands on security labs covering Microsoft Sentinel, Defender for Cloud, Entra ID, Key Vault, and AKS.
- Wrote KQL detection rules and Logic Apps playbooks in Sentinel and mapped detections to the MITRE ATT&CK framework.
- Configured AKS with a private container registry, RBAC controlled image pulls, and Kubernetes network policies following the CIS Kubernetes Benchmark.

Education and Certifications

University of Regina, Saskatchewan, Canada

2023 to 2026

Bachelor of Software Systems Engineering

Relevant coursework: Cybersecurity, Network Security, Cloud Computing, Secure Software Development

Certifications

- Microsoft Certified: Azure Security Engineer Associate (AZ 500) [Verify Here](#)
- Microsoft Certified: Azure Network Engineer Associate (AZ 700) [Verify Here](#)
- CompTIA Security+ [Verify Here](#)
- CompTIA Network+ [Verify here](#)
- Palo Alto Networks: Security Fundamentals [Verify Here](#)
- Palo Alto Cloud Security Fundamentals [Verify Here](#)
